

# WordPress website

## FOR BEGINNERS

### #01

#### TECH FOUNDATION

Organise your url, web hosting and install Wordpress. You can buy a package to do this all at once.

### #02

#### MAKE SITE SECURE

You can do this easily by arranging a SSL certificate when you set up web hosting.

### #03

#### INSTALL ELEMENTOR

Install the Elementor plug in. This is a web-builder that is very easy to use!

### #04

#### CHOOSE A TEMPLATE

I would recommend one from the Astra Starter library. You can make your site look like the demo in one click!

### #05

#### MAKE IT YOUR OWN

Customise your template using Elementor.

You are ready to launch!
